

Acme Cloud Customer Support SLA

Support Channels

Customers can reach support via the in-app chat assistant, email, or the community forum. Enterprise customers additionally have access to a dedicated Slack channel and phone support.

Priority Levels

Tickets are classified as Urgent, High, Medium, or Low based on business impact. Urgent issues involve full service outages; High issues involve major feature degradation; Medium issues involve minor bugs or how-to questions; Low issues involve feature requests or general feedback.

First Response Targets

Urgent: 1 hour (Enterprise), 4 hours (Pro), 8 hours (Basic/Free). High: 4 hours (Enterprise), 8 hours (Pro), 24 hours (Basic/Free). Medium: 1 business day for all plans. Low: 2 business days for all plans.

Resolution Targets

Urgent issues are targeted for resolution or a workaround within 8 business hours. High priority issues within 2 business days. Medium priority issues within 5 business days. Low priority items are addressed on a best-effort basis and may be added to the product roadmap.

Escalation Process

If a customer feels their issue is not progressing according to these targets, they can request escalation by replying 'ESCALATE' on the ticket or contacting their account manager directly. Escalated tickets are reviewed by a support lead within 2 business hours.

Customer Satisfaction Follow-up

After a ticket is resolved, customers receive a short satisfaction survey (1-5 scale). Scores of 3 or below trigger an automatic follow-up from a support lead to ensure the issue was fully addressed.
